

PROJECT PDR

PROFESSIONAL WEBSITE BLUEPRINT & PROPOSAL

A complete plan to design, build, and launch a fast, modern, conversion-focused website engineered to grow your business online.

NEERAJ KUMAR THAKUR

Independent Web Developer & Digital Strategist

Prepared exclusively for your business

YOUR WEBSITE SHOULD BE YOUR HARDEST-WORKING ASSET

In today's market, your website is the first impression most customers will ever have of your business — and often the deciding factor in whether they trust you, contact you, or move on to a competitor. A slow, outdated, or hard-to-use site quietly costs you enquiries every single day.

Project PDR is built to fix exactly that. I will design and develop a high-performance, mobile-first website that loads in under three seconds, ranks well on Google, and is engineered around one clear goal: turning visitors into paying customers. Every section, button, and page will have a purpose — to build trust, communicate your value, and drive measurable action.

WHAT THIS PROJECT DELIVERS

MORE VISIBILITY

An SEO-ready structure that helps the right customers find you on Google and maps.

BETTER PERFORMANCE

Lightning-fast load times and smooth interactions that keep visitors engaged.

HIGHER CONVERSIONS

Clear calls-to-action and lead capture that turn traffic into real enquiries.

LASTING RELIABILITY

A secure, maintainable foundation that grows alongside your business.

"A GREAT WEBSITE DOESN'T JUST LOOK GOOD — IT EARNS ITS COST BACK."

The objective of Project PDR is simple: deliver a site that pays for itself through the customers it brings in.

WHAT WILL BE BUILT — AND WHY IT MATTERS

Here's a clear breakdown of the technology and features that make up your website. Each one is chosen for a practical reason: speed, trust, discoverability, or conversions.

FULLY RESPONSIVE DESIGN

A pixel-perfect experience on mobile, tablet, and desktop. Since most visitors arrive on phones, the mobile layout is treated as the priority, not an afterthought.

SPEED OPTIMIZATION

Compressed images, clean code, lazy loading, and caching to target sub-3-second load times and strong Google Core Web Vitals scores.

SECURE FOUNDATION

SSL/HTTPS encryption, secure form handling, spam protection, and a backend built with safe, modern practices to protect your data and your customers.

SEO-READY STRUCTURE

Clean URLs, optimized meta tags, schema markup, fast indexing, and a logical site structure so search engines understand and rank your pages.

INTERACTIVE UI

Smooth animations, intuitive navigation, and engaging micro-interactions that make the site feel premium and keep visitors exploring.

LEAD CAPTURE & INTEGRATIONS

Contact forms, click-to-call, WhatsApp, Google Maps, and social links — every easy path for a customer to reach you.

TECHNICAL FOUNDATION

HTML5 / CSS3 / JavaScript

Mobile-First Build

Core Web Vitals Tuned

Schema Markup

Google Analytics

Search Console

SSL Security

Cross-Browser Tested

Accessibility Conscious

The final tech stack is tailored to your needs during the discovery phase — whether that's a custom-coded build for maximum speed or a manageable CMS so you can edit content yourself.

A CLEAR, PROVEN PATH TO LAUNCH

You'll always know exactly where the project stands. The build moves through five structured phases, with your feedback and approval built into each stage — no surprises, no guesswork.

1

DAY 1

DISCOVERY & STRATEGY

We discuss your goals, audience, and competitors. I gather your content, branding, and references, then map out the site structure and define what success looks like.

2

DAY 1

WIREFRAMING & DESIGN

I design the layout and visual concept for the homepage and key pages. You review and request changes before any development begins — so the direction is locked in early.

3

DAYS 2-3

DEVELOPMENT

The approved design is built into a fast, responsive, fully functional website. Forms, integrations, animations, and SEO foundations are all implemented and connected.

4

DAY 3

TESTING & QUALITY ASSURANCE

Rigorous testing across devices and browsers — speed, links, forms, security, and responsiveness. You get a live preview link to review everything firsthand.

5

DAY 4

FINAL LAUNCH & HANDOVER

We go live, connect your domain, set up analytics, and complete final checks. You receive a short training walkthrough plus a handover guide so you're fully in control.

ESTIMATED TIMELINE: 3-4 DAYS

Most projects launch within 3-4 working days once content is ready. Larger or e-commerce builds may extend slightly — confirmed precisely during discovery.

EXCEPTIONAL VALUE, HONEST PRICING

This pricing is intentionally competitive — designed to give new and growing businesses a premium, professional website without the heavy agency price tag. Every rupee is itemized so you see exactly what you're paying for.

ITEMIZED COST BREAKDOWN

DELIVERABLE	EFFORT	INVESTMENT
UI/UX Design & Wireframing Custom layout, visual concept, mobile-first design, revision rounds	~1 day	₹6,000
Front-End Development Responsive build, interactive UI, animations, cross-device testing	1-2 days	₹9,000
Backend & Integrations Secure forms, WhatsApp, maps, email, basic CMS where needed	~1 day	₹5,250
SEO Setup & Optimization Meta tags, schema, analytics, Search Console, speed tuning	½ day	₹3,000
Deployment & Launch Domain & hosting setup, go-live, handover, training walkthrough	½ day	₹2,250
TOTAL PROJECT INVESTMENT	3-4 DAYS	₹25,500

LET'S BRING PROJECT PDR TO LIFE

Everything is in place to begin. Greenlighting the project is simple, and I can have the discovery phase underway within days. Here's exactly how we start:

1

APPROVE THE PROPOSAL

Reply to confirm the package that fits your needs, or share any questions — I'm happy to adjust the scope.

2

BOOK THE KICKOFF MEETING

We schedule a short 20–30 minute call to align on goals, content, and timeline.

3

CONFIRM & BEGIN

A 50% deposit reserves your slot and the discovery phase starts the same week.

3–4

DAYS TO LAUNCH
